TETWare

- Issues for us
- Technical overview

# Issues for us

For us, for external contributors

- System requirements
  - C environment to run test case controller
  - Windows: MKS toolkit, MS VC++
- $$ - Windows or Java, must **buy** TETWare
  - TETWare Lite (local) $5,800
  - Distributed TETWare $11,600

Issues for us

- Very high barrier to external contributors
  - $$
  - Other bits to buy, install
- "Feels like" C, not Java

TETWare Lite

- Scenario: which tests, repetition, etc.

- Controller: interprets scenario, runs tests, collects results & writes to results (journal) file

- TETWare report generator or other tools to process journal

Distributed TETWare
